Subject: Application for PhD Position in Test-Time Adaptation and Agentic AI — Ref [TODO: verify with user] — Nauval Zulfikar

Dear Dr. Bozorgtabar,

I am writing to express my interest in the PhD position in Test-Time Adaptation and Agentic AI at Aarhus University's Department of Electrical and Computer Engineering. I am eager to contribute to your research themes, particularly in test-time adaptation and agentic decision-making, and I am available to start on 1 September 2026.

Your paper, [TODO: verify supervisor paper title via Google Scholar], has significantly inspired my application. The innovative approach to agentic decision-making outlined in your work aligns closely with my research interests and aspirations.

My academic and professional background has equipped me with the skills and experience necessary for this role. During my MSc in Business Analytics at Aston University, I completed a dissertation titled "*Enhancing Supply Chain Information Sharing Systems Through Blockchain: Integrated Customer Reviews LLM Analysis: A Smart Contract Approach*". This project involved fine-tuning the DeBERTa-v3 transformer on multi-tier supplier review data, which honed my skills in transformer fine-tuning and system integration—key components relevant to your research themes.

Additionally, I have led projects such as the *LLM-Generated Adaptive Shipper Decision Rules* and the *Crowd-Shipping ABM*, both of which involved rigorous experimentation and behavioural modelling. These experiences have prepared me to tackle the challenges of test-time adaptation and contribute to the development of multimodal foundation models.

I acknowledge that my MSc is in Business Analytics rather than a pure Computer Science field, which may present a gap in theoretical depth. However, my hands-on experience with machine learning systems and my commitment to bridging this gap through continuous learning and practical application make me a strong candidate for this position.

I have attached my CV, transcripts, and a one-page statement of interest to provide further details on my qualifications and experiences. I am enthusiastic about the opportunity to contribute to your research and am keen to discuss how my background, skills, and enthusiasms align with the goals of your lab.

Thank you for considering my application. I look forward to the possibility of discussing this exciting opportunity with you.

Sincerely,

Nauval Zulfikar
