Hiring Team - Data

Mystenlabs

USA (Remote)

Dear Hiring Team,

Dear Hiring Team at Mysten Labs,

As a seasoned Data Scientist with over five years of experience and a profound interest in blockchain technologies, I am excited to apply for the Senior Data Scientist position at Mysten Labs. My background in developing robust machine learning (ML) solutions within the banking and public sectors aligns well with your focus on decentralised protocols and market structure research in the DeFi ecosystem.

At Bank Muamalat, I developed NLP credit and segmentation models, achieving a remarkable +5.3% return on investments. This experience equips me with the capability to create and analyse financial models that will contribute significantly to understanding DeFi protocols and stablecoin mechanics.

I led a project that automated government data operations at the Public Works & Spatial Planning Department, producing a 45% increase in delivery speed and a 20% gain in data efficiency. My proficiency in building end-to-end ML pipelines on AWS and PySpark, combined with my experience in executing analyses that drive organisational performance, is directly relevant to the high-performance demands at Mysten Labs.

Additionally, my work with a remote UK-based team on ML marketing initiatives enhanced click-through rates by +40% and follower growth by +22%. This experience of iterative analysis and clear communication lends itself well to the collaborative environment for DeFi protocol measurement and analysis you seek to foster at Mysten Labs.

I acknowledge that my direct experience with on-chain data is limited; however, my adaptability and eagerness to learn, as demonstrated during my MSc in Business Analytics at Aston University, enable me to quickly familiarise myself with new technologies and methodologies.

I am currently based in Milan, Italy, with EU work rights and the ability to work in the UK under a Graduate Visa. I am open to remote, hybrid, or onsite roles across the UK and EU.

How does Mysten Labs envision the integration of advanced data science methodologies with evolving DeFi landscapes to ensure impactful decision-making?

Thank you for the consideration.
